RAFFLES' BANDED LANGURS IN SINGAPORE

The Raffles' banded langur (*Presbytis femoralis femoralis*) is critically endangered in Singapore with a small population size and a restricted distribution. In order for conservation actions to be implemented, population estimate and the distribution of the Raffles' banded langurs need to be updated through field surveys. If you are interested to find out more on how to participate as a volunteer in the surveys for the Raffles' banded langurs in Singapore, please sign up below to attend the session. Results from the previous rounds of citizen science surveys will also be presented.

ANDIE ANG

Andie chairs the Raffles' Banded Langur Working Group (RBL WG; www.facebook.com/RBLWG) and is a member of the IUCN SSC Primate Specialist Group (Asia). She will be leading the survey efforts.

JAYASRI S.L.

Jayasri leads the "A Walk with your Neighbours" monthly monkey walk in Singapore. She will be introducing the SGBioAtlas app, which is used for the surveys.
