**Press Release: Water Reclamation Plant at Kranji**

The Nature Society is aware of the proposal by PUB to rebuild the water reclamation plant at Kranji. Our concern is that the section of Rail Corridor that will be occupied by the new PUB site has previously served as a 50 m wide wildlife corridor connecting the Sungei Mandai mangroves to other habitats that occur along the Rail Corridor to the south for over 100 years. This connection will now be broken by the construction of the new plant. The Nature Society has called for the recently opened park connector joining the Rail Corridor to the Sungei Mandai canal to be further enhanced to re-establish wildlife connectivity lost to the proposed construction.
